New Tattoo Care

Remove bandage after 1 hour. (Don't re-bandage.) Wash with antibacterial soap and warm water, pat dry with a soft towel. Repeat 2x per day. Wait 30 minutes, apply a fine coat of neosporin, bacitracin, or vaseline 5-7x per day.

New Piercing Care

Wash piercing 2x per day using medicated soap, rotate jewelry while cleaning, rinse. Clean piercing 2x per day using body piercing care solution. Apply solution using a cotton swab. Clean jewelry, rotate repeat. Apply sea salt spray 2x daily, rotate jewelry, repeat. If used near eyes, spray cotton ball, then apply.

New Oral Piercing Care

After eating, snacking, or drinking anything other than water, rinse with mouthwash. Suck on ice chips for 48 hrs. and drink 8-10 glasses of cold water a day to help reduce swelling. Brush tongue with toothbrush, push up on bottom ball with thumb, brush top ball and bar. Repeat for bottom ball and bar. The tongue takes 2 weeks to 1 month to heal. No smoking for 2 weeks. We suggest sea salt spray to help accelerate healing time. It is necessary to downsize your barbell after 2 weeks. We carry a full line of downsizing barbells. Since you were serviced here, ask about your discount.

Other Important Information

Always wash hands thoroughly prior to touching your new tattoo or piercing. Do not get in the habit of touching your new tattoo or piercing unless you are caring for it. We are only providing a service. It's your responsibility to take care of your new tattoo or piercing. If you have any questions or if you notice any changes that look other than normal or feel that something may be of concern, please promptly contact your professional tattooist or piercer.
